Accounts of Mexico’s historic 1968 movement have often minimized the importance of earlier and subsequent student revolts, have tended to reduce ‘68 to the student massacre in Tlatelolco, have portrayed the strike as a unified movement, have overemphasized the role of leftist male leaders in Mexico City, and have caricatured both the right and the left. This October 2–4, 2016 conference aims to initiate a discussion with leading scholars that complicates these traditional narratives and places student rebellions within the context of Mexico’s political history. Participants will explore competing expressions of democracy and radicalism in different regions of Mexico and situate case studies within the global 1960s and 1970s. In addition, panelists will examine movements for accountability and justice for the disappearances, tortures, and killings during this period. The final goal is to publish an edited volume in 2018 during the 50th anniversary of 1968.
